

Data Dictionary: Combined Hospital Quality and Performance View

Table: facilities

Column Name	Source Table	Data Type	Description
facility_id	facilities	text	Unique identifier for each healthcare facility. Referenced by Hospital_General_Information, Deaths_complications, HCA_Infections, Unplanned_visits, and specialty_scores via facility-level relationships.
facility_name	facilities	text	Hospital name. Used across all tables for identification and joins by name in hcahps and honor_roll.
address	facilities	text	Street address of the hospital. Referenced by all hospital performance and outcome tables for facility context.
city_town	facilities	text	City or town where the hospital is located. Used across all performance and outcome tables.
state	facilities	text	State abbreviation for hospital location. Used across all related tables for geographic grouping.
zip_code	facilities	bigint	ZIP or postal code of the hospital. Used across all performance tables for location-based analysis.
county_parish	facilities	text	County or parish where the hospital is located. Used for regional aggregation across all linked tables.
telephone_number	facilities	text	Primary contact number for the hospital. Referenced across hospital-level and outcome tables.

Table: Hospital_General_Information

Column Name	Source Table	Data Type	Description
facility_id	Hospital_General_Information	text	Links to facilities.facility_id (1:1 relationship with facilities).
hospital_type	Hospital_General_Information	text	Type of hospital (e.g., Acute Care, Critical Access). Facility-level attribute.
hospital_ownership	Hospital_General_Information	text	Ownership type (e.g., Government, Non-Profit, Proprietary). Facility-level attribute.
emergency_services	Hospital_General_Information	text	Indicates if emergency services are available (Yes/No). Facility capability attribute.
meets_criteria_for_birthing_friendly_designation	Hospital_General_Information	text	Indicates birthing-friendly designation. Quality designation attribute.
hospital_overall_rating	Hospital_General_Information	text	Overall hospital rating (e.g., 1–5 stars). Performance summary metric.
hospital_overall_rating_footnote	Hospital_General_Information	text	Notes related to rating. Metadata field.
mort_group_measure_count	Hospital_General_Information	text	Number of mortality measures in group. Grouped performance metric.
count_of_facility_mort_measures	Hospital_General_Information	text	Mortality measures reported. Facility-level metric.
count_of_mort_measures_better	Hospital_General_Information	text	Mortality measures better than national average. Performance comparison.
count_of_mort_measures_no_difference	Hospital_General_Information	text	Mortality measures equal to national average. Performance comparison.
count_of_mort_measures_worse	Hospital_General_Information	text	Mortality measures worse than national average. Performance comparison.
safety_group_measure_count	Hospital_General_Information	text	Number of safety measures in group. Grouped metric.
count_of_facility_safety_measures	Hospital_General_Information	text	Safety measures reported. Facility metric.
count_of_safety_measures_better	Hospital_General_Information	text	Safety better than national average. Performance metric.

count_of_safety_measures_no_dif ferent	Hospital_General_Information	text	Safety equal to national average. Performance metric.
count_of_safety_measures_worse	Hospital_General_Information	text	Safety worse than national average. Performance metric.
readm_group_measure_count	Hospital_General_Information	text	Number of readmission measures. Grouped metric.
count_of_facility_readm_measures	Hospital_General_Information	text	Readmission measures reported. Facility metric.
count_of_readm_measures_better	Hospital_General_Information	text	Readmission better than national average. Performance metric.
count_of_readm_measures_no_dif ferent	Hospital_General_Information	text	Readmission equal to national average. Performance metric.
count_of_readm_measures_worse	Hospital_General_Information	text	Readmission worse than national average. Performance metric.

Table: Deaths_Complications

Column Name	Source Table	Data Type	Description
facility_id	Deaths_Complications	text	Links to facilities.facility_id.
measure_id	Deaths_Complications	text	Unique identifier for the mortality or complication measure.
measure_name	Deaths_Complications	text	Name of the mortality or complication measure.
compared_to_national	Deaths_Complications	text	Comparison of hospital performance to national average (Better, No Different, Worse).
denominator	Deaths_Complications	bigint	Number of cases included in the measure.
score	Deaths_Complications	decimal	Hospital's score for the measure.
footnote	Deaths_Complications	text	Additional notes or clarifications about the measure.

Table: HCA_Infections

Column Name	Source Table	Data Type	Description
facility_id	HCA_Infections	text	Links to facilities.facility_id.
measure_id	HCA_Infections	text	Unique identifier for the infection measure.
measure_name	HCA_Infections	text	Name of the healthcare-associated infection measure.
score	HCA_Infections	decimal	Hospital's infection rate or standardized infection ratio.
compared_to_national	HCA_Infections	text	Comparison to national average (Better, No Different, Worse).
footnote	HCA_Infections	text	Additional notes or clarifications about the measure.

Table: Unplanned_Visits

Column Name	Source Table	Data Type	Description
facility_id	Unplanned_Visits	text	Links to facilities.facility_id.
measure_id	Unplanned_Visits	text	Unique identifier for the unplanned visit measure.
measure_name	Unplanned_Visits	text	Name of the unplanned visit measure.
score	Unplanned_Visits	decimal	Hospital's rate of unplanned visits.
compared_to_national	Unplanned_Visits	text	Comparison to national average (Better, No Different, Worse).
footnote	Unplanned_Visits	text	Additional notes or clarifications about the measure.

Table: Specialty_Scores

Column Name	Source Table	Data Type	Description
facility_id	Specialty_Scores	text	Links to facilities.facility_id.
specialty	Specialty_Scores	text	Medical specialty (e.g., Cardiology, Orthopedics).
score	Specialty_Scores	decimal	Performance score for the specialty.
national_percentile	Specialty_Scores	decimal	Percentile ranking compared to national data.
footnote	Specialty_Scores	text	Additional notes or clarifications about the specialty score.

Relationships

- facilities → Deaths_complications: One-to-many via facility_id
- facilities → HCA_Infections: One-to-many via facility_id
- facilities → Unplanned_visits: One-to-many via facility_id
- facilities → Hospital_General_Information: One-to-many (or one-to-one) via facility_id
- measures → Deaths_complications: One-to-many via measure_id
- measures → HCA_Infections: One-to-many via measure_id
- measures → Unplanned_visits: One-to-many via measure_id
- facilities → hcahps: Indirect relationship (no FK; likely via facility_name or cms_certificate)
- facilities → honor_roll: Indirect relationship (no FK; likely via hospital_name)
- specialty_scores: No relationship to other tables (standalone reference table)

Purpose

This combined view enables comprehensive analysis of hospital performance, patient outcomes, infection rates, readmission statistics, and specialty scores in a single unified dataset. It supports reporting and quality improvement initiatives across healthcare Hospital.
